

WHAT IS IT?

OEIMS helps professors supervise digital exams in real time by monitoring student devices and highlighting suspicious events through a clear dashboard. It turns exam activity into organized alerts, helping professors react faster and with more confidence.

WHAT CAN IT DO?

Live classroom overview

Shows the exam room layout, helping professors quickly see which students may need attention.

Student status tracking

Displays whether each student is connected, active, or no longer communicating with the system.

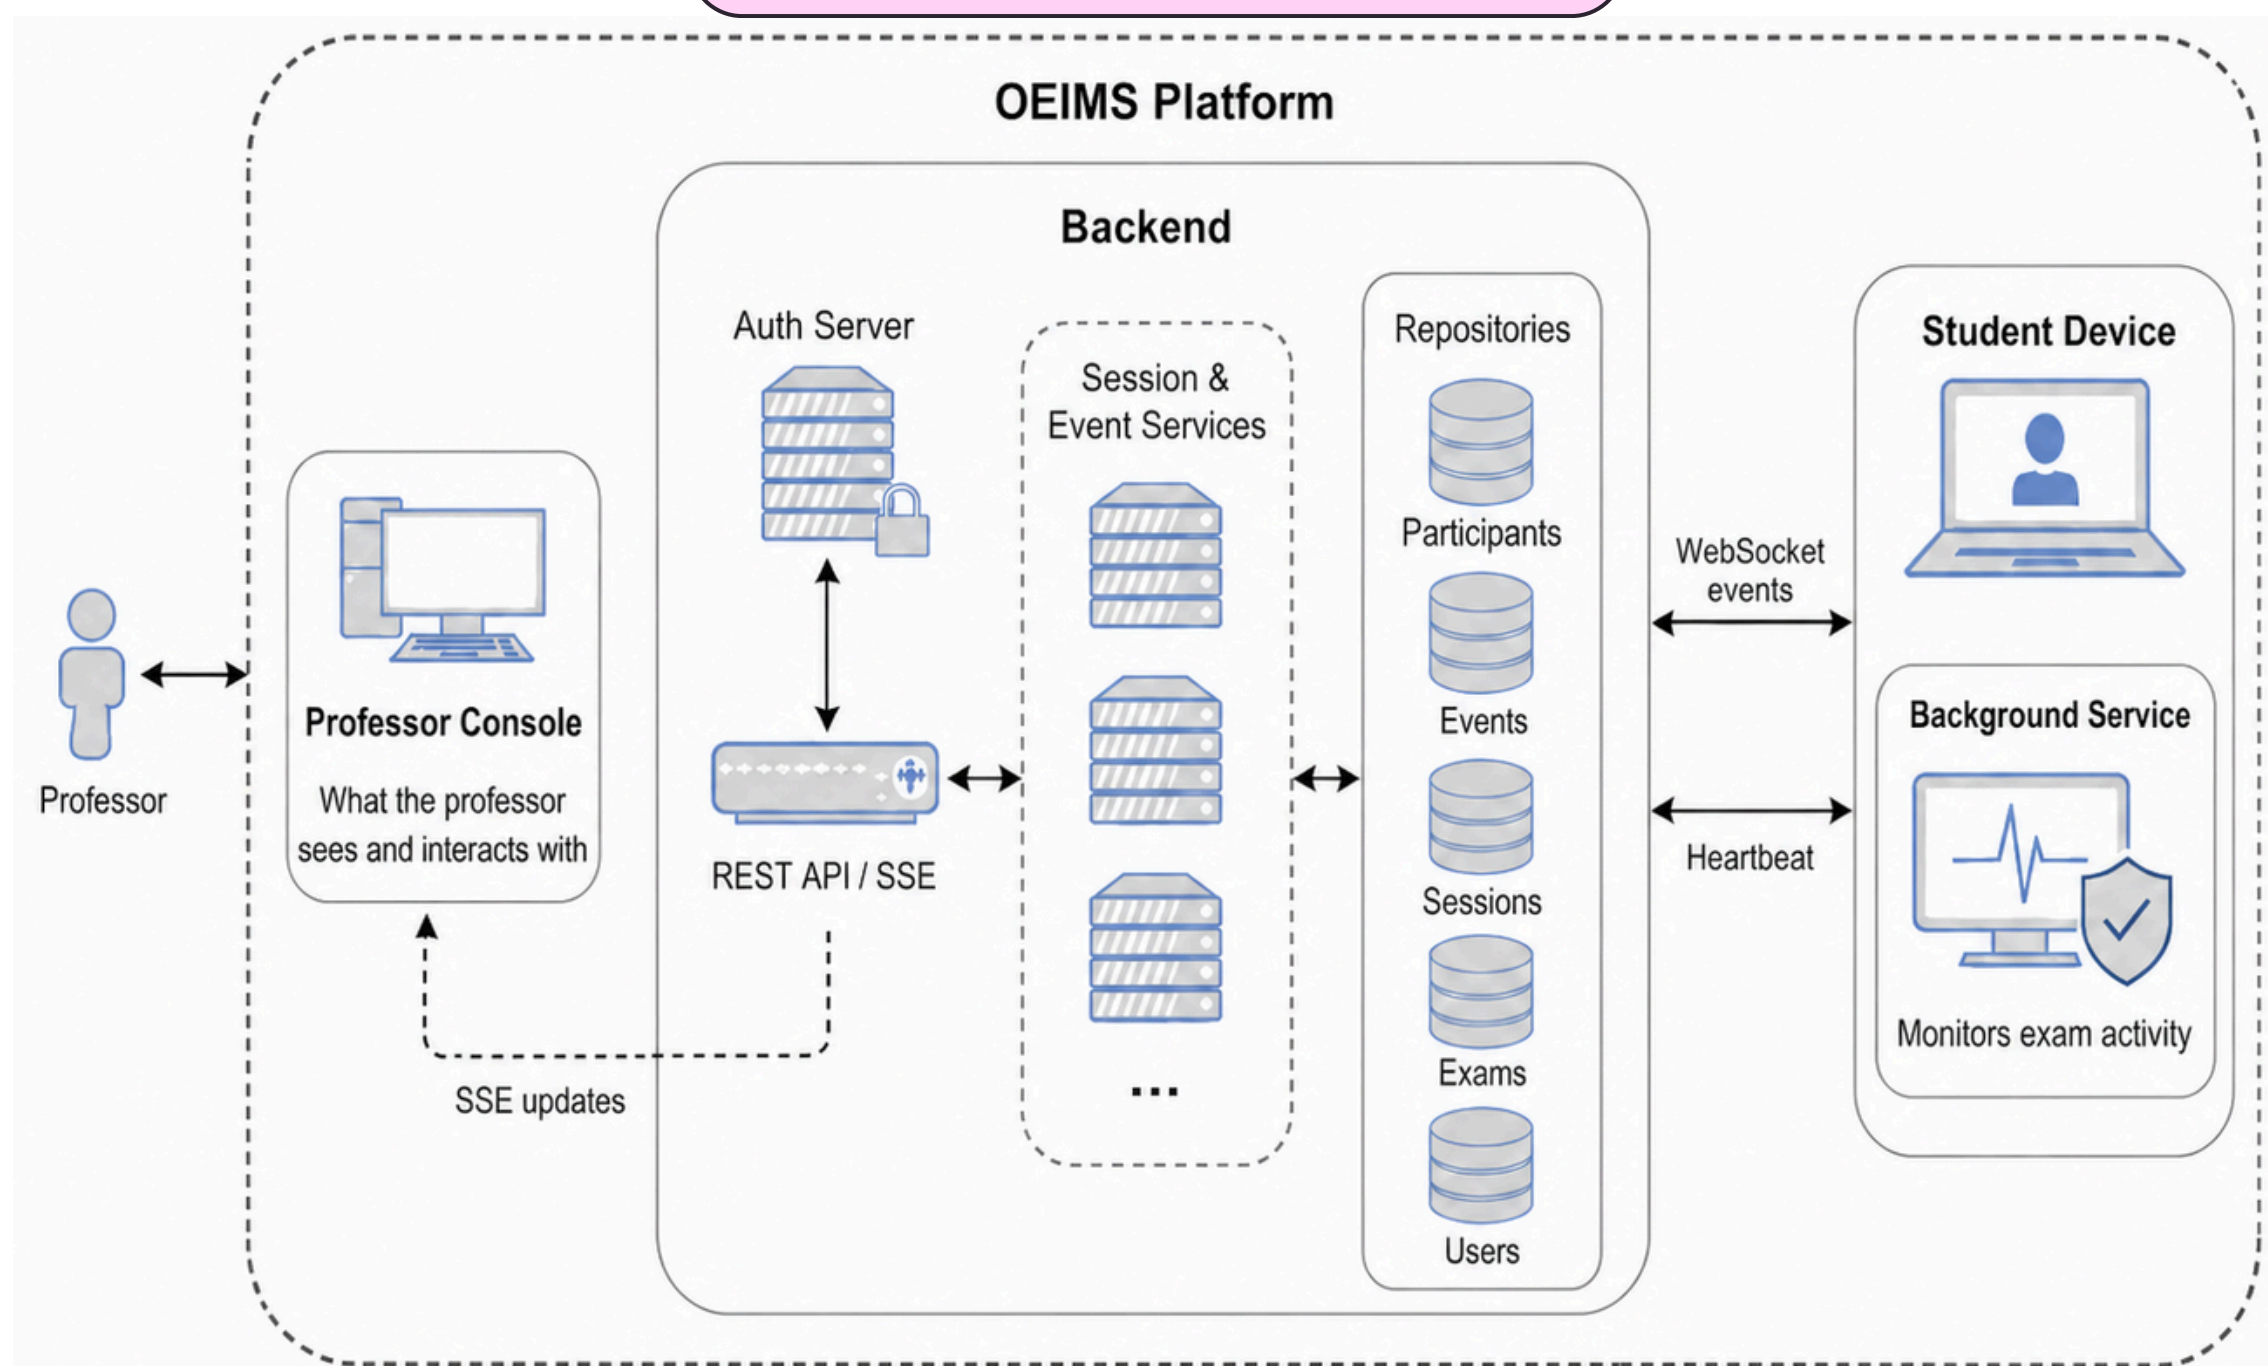

Per-student event detection

Detects restricted programs, focus changes, and network changes, while blocking the clipboard and processes.

Severity-based alerts

Classifies events as warnings or critical alerts so professors can prioritize what matters most.
